

Increase your benefits by protecting your livestock

BIOGEL

Animal house cleaner with unique gel forming properties.

- excellent adhesion power
- labour and water saving
- safe in use

Bioprotexion Box

BIOGEL is part of the Bioprotexion Box by CID LINES, a program to ensure food safety on your farm and to increase your benefits.

BIOGEL is a new technology for efficient, economical and user friendly cleaning.

Gel is the latest technology in cleaning. It allows a very long contact time. The gel does not fall off by gravity nor does it dry, allowing the chemical more time to dissolve the dirt, which results in better cleaning. Removing the dirt results in a > 80% reduction in micro organisms, allowing a better disinfection afterwards.

A longer contact time saves on labour, water and energy (no hot water necessary).

Labour, water and energy saving

■ contact time (chemical) ■ labour
■ energy consumption ■ water consumption (less manure)

Comparison test on soaking products.

Thanks to the use of soaking products, the cleaning time and water consumption decrease obviously. 3 products (BIOGEL included) have been compared with each other.

The test showed that BIOGEL (3% dilution) has a very long and good sticking effect on the walls, up to 30 minutes. A saving in cleaning time up to 50% is possible.

In the speed-test (= 10 minutes contact time), BIOGEL (3% dilution) had a superior dirt-solving activity, compared to competitors traditional foaming products at a concentration of at least 5%. The low dosage needed with BIOGEL in order to have a good sticking capacity and dirt solving activity, makes it an economically interesting (= cheaper) product in use!

Lukas Schulthess,
Strickhof Lindau (Switzerland)

Application

- 1 remove dirt
- 2 in dirty conditions: soak with water
- 3 apply BIOGEL at min. 40 bar (580 psi) with a foam lance with cold water
- 4 dilution: 3 – 5%
- 5 rinse with high or low pressure, cold water
