

Husten-Aid

Husten-Aid is an all natural blend of essential oils and plant sterols to be administered via the drinking water.

Husten-Aid application provides support to the respiratory system during times of stress to reduce mucus accumulation and improve its discharge from the respiratory tract.

Respiratory stress can occur due to ventilation issues during times of large temperature variation or accumulation of atmospheric ammonia levels. Certain vaccinations can stimulate mucous secretions that interfere with normal respiration.

Recommendations:

- Administer during times of observed respiratory stress noted by coughing or labored breathing.
- Administer after vaccinations for 3 days (recommended to withdraw *Husten-Aid* 1 day prior to 2 days post live vaccination). Do not mix with vaccines.
- Administer at rate of 2 oz. to 6 oz. per gallon of stock solution. Set proportioner to deliver 1 fluid oz. per gallon of drinking water.

Ingredients:

- *Husten-Aid* contains eucalyptus oil, peppermint oil and plant sterols.

Packaging:

- One quart bottles; 12 bottles per case.

Animal Use Only / Not for Human Consumption / Keep in a Cool Dry Place
