Part # CVExx	Contains 20 x 32oz Packs	Lot # xxxxx

Modern poultry and swine genetics exhibit a high demand for the amino acid, lysine. When intake of lysine is limited, growth rates are impacted and detrimental behaviors are often exhibited. **Ammo Pack** is a proprietary oral supplement for poultry and livestock that supplies lysine and other supporting nutrients via drinking water for flexible, short-term use. **Ammo Pack** was designed, tested, and proven under field conditions by Matt Greenwood, Ph.D. **Ammo Pack** is a useful tool to assist poultry and swine producers under the following conditions:

BROILER BREEDER REPLACEMENTS

Onset of detrimental behavior such as 'piling', nervousness, feather licking, feather picking, and aggression. Treat for 3-5 days.

BROILER BREEDERS

Onset of aggressive behavior occurring from moving into the breeder house and light stimulation

BROILERS

Day prior to, day of, and day after changing feed phases to minimize water intake stalls. Prior to flock sale date to enhance water intake and weight gains while on final feed. Use for 3-5 days.

TURKEYS

Intermittently during the finishing phase of production when water and feed intake stalls.

SWINE

Onset of vice behaviors such as tail biting in hogs.
