

SPRAY-VAC®

ANIMAL SCIENCE PRODUCTS
INCORPORATED

Spray-Vac® rescues you from drowning under a wave of distilled water by stabilizing your own tap water making it safer than distilled water for your spray vaccines. One case of Spray-Vac replaces 96 gallons of distilled water. Spray-Vac also protects landfills from the excessive waste left behind through the use of distilled water, thus helping you reduce your operation's carbon footprint and improve sustainability. Go GREEN and use Spray-Vac as the ideal solution for protecting your vaccines sprayed through hatchery spray cabinets while reducing the unnecessary hassle and waste associated with distilled water.

Advantages of Spray-Vac:

- Immediate stabilization of the water
- Rescues vaccines from the harmful effects of oxidizing elements, controls pH, and balances tonicity in ordinary tap or well water
- Safer than distilled or deionized water as vaccine diluent
- Pink dye to indicate the spray solution is completely safe and ready to receive vaccine
- Ideal for use in backpack-type sprayers in the poultry house
- Will not clog sprayer nozzles
